

**ACUTE\***

## **AGENDA**

### **Trichloroethylene (TCE) groundwater plume: Next Steps**

**WHEN: 10:00 AM, Friday December 13, 2013**

**WHERE: In Bellaire, Shanty Creek Resort- North Bellaire Room**

**PURPOSE:** The purpose of this meeting is to develop a forward-looking timeline for addressing the trajectory of the TCE plume relative to the Cedar River Well Field, based on (1) the most recent plume migration information, (2) the findings from the preliminary engineering study for installing a new well field, and (3) the State of Michigan's anticipated appropriations process. We will also introduce possible options and next steps for addressing residual TCE in the groundwater.

#### **AGENDA:**

1. Welcome, introductions, and clarify the purpose of the meeting (Gary Knapp)
2. M-DEQ, AMEC, and Health Dept. TCE plume migration update (Janice Adams, Steve Murray, and Chuck Edwards)
3. Cedar River Well Field replacement, preliminary engineering findings, including proactive and reactive cost estimates (Joe Elliot)
4. Development of a consensus on a timeline needed to proactively protect the existing public municipal water system (facilitated by Gary Knapp)
5. Match our proactive timeline with the state appropriations process (Representative Greg MacMaster)
6. Brief introduction of remediation related alternatives for future ACUTE agendas.
7. Wrap-up and next steps
